Lab: REST Services and AJAX

Problems for in-class lab for the "JavaScript Applications" course @ SoftUni.

1. REST Countries

NOTE: Install "Postman" REST Client to ease your tasks.

Your first task is to get detailed information about Bulgaria.

- Send a "GET" request to the link given below.
- **Copy** the response in JSON format.

REQUEST:

https://restcountries.com/v2/name/Bulgaria

```
https://restcountries.com/v2/name/Bulgaria
                                                                                                                                                 Send
RESPONSE:
                   https://restcountries.com/v2/name/Bulgaria
                                                                                                                                                  Send

2. GitHub: Labels Issue

Get the first issue from repository with name "test-nakov-repo". Send a GET request to https://api.github.com/repos/testnakov/test-nakov-repo/issues/:id, where :id is the issue.

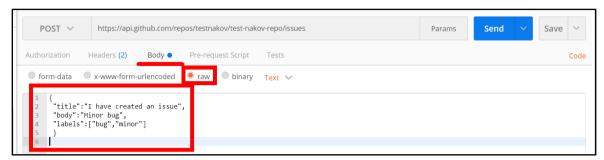

☐ Dootoomo ☐ Dunnor III Trod

3. Github: Create Issue

This time we have to create an issue (data should be send to the server). Send a "POST" request to the server with the following JSON as **body** (send it as **application/json**):

You need to use your GitHub account credentials to submit issues. Under the Authorization tab, select Basic and enter your username and password. Send the request to the URI from the previous task, but without the :id.
